#### **DETAILED ACTION**

### Claim Objections

### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 4-6, 9, 10, 12-14, 17-21 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over DE 4445436 in view of Paoletti.

There is disclosed in the German reference a milk foaming device, comprising: a milk inlet system, including a disposable hose 14, for pressurizing milk from a milk source; an air inlet system, including a disposable hose 16; compressed air source (pump) and valve arrangement 119, 120, for pressurizing air from the air source; a steam inlet system, including a disposable hose 9; a mixing area 11 to mix the milk, air and steam, wherein the mixing area is downstream of the milk inlet system; an expansion area 3; a hose connector (connected to the expansion area) for connecting the milk and air inlet systems, the connector including a three-way connection; and a diffuser 5, including an insert and spout, to gather the flow of foamed milk to be dispensed.

Paoletti discloses that it is known in the art to provide a mixture nozzle 5 with a hollow nozzle block 3, the nozzle having a plurality of protrusions 5C positioned

Art Unit: 1761

thereon, the protrusion forming, with an inner wall of the block, a plurality of channels (orifice areas)

It would have been obvious to one skilled in the art to provide within the mixing area of DE 4445436 a mixing nozzle arrangement as taught in Paoletti, in order to more thoroughly mix the air, steam and milk.

Claims 2, 3 and 22-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over the prior art as applied to claims above, and further in view of Hourizadeh.

Hourizadeh discloses that it is known in the art to use a pump 140 to pressurize a supply milk to a foaming device and provide a sanitation system 50, 95 to provide hot water to the foaming device.

It would have been obvious to one skilled in the art to provide the device of DE 445436 with the sanitation system taught in Hourizadeh, for the purpose of cleaning the foaming device.

In regards to the use of a peristaltic pump, it is the opinion of the examiner that the pump disclosed in Hourizadeh is a functional equivalent to that claimed, and would perform equally as well.

Claim 11 rejected under 35 U.S.C. 103(a) as being unpatentable over the prior art as applied to claims 1, 5 and 10 above, and further in view of Detsch.

Detsch discloses that it is known in the art to use a microfilter in the path of an air hose providing compressed air.

Application/Control Number: 10/615,502 Page 4

Art Unit: 1761

It would have been obvious to one skilled in the art to provide the device of DE 4445436 with the microfilter taught in Detsch, in order to clean the air being provided to the mixing area.

## Allowable Subject Matter

Claims 7 and 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Reginald L. Alexander whose telephone number is 571-272-1395. The examiner can normally be reached on Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Milton Cano can be reached on 571-272-1398. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
